Whoosh!: Invent a Robot

One of Lonnie Johnson's earliest inventions as a kid was Linex, a robot made from scrap metal, a tape recorder, a broken jukebox, and his sister's walkie-talkie. Think about what you might use to design and build your own robot. What recycled materials would you use? What is your purpose for building it - does it help clean or keep you company? What would your robot look like? What sounds would it make or how would it talk? How would it move or walk? What complications might arise as you are building it, and how would you persevere like Lonnie and fix the robot? Write at least six sentences about your robot.
